Dear Dr. Li,

Did you try any of the reviewers I suggested? It is difficult to believe that 9 of them would decline to review.

I am nearly done writing a response to review #1. The reviewer knows nothing of error analysis, the review is misconceived from the start, and is completely incompetent; scientifically meritless.

It is arbitrary that you should reject based one negative but incompetent review, in light a review #2 that is positive and constructive. It is more reasonable to accept based on the one competent and positive review.

Yours sincerely,

Pat Frank

Dear Dr. Frank,

It took a quite long period for me to find suitable reviewers for your manuscript. I contacted 11 potential reviewers, and was turned down by 9 of them. I don't think that it is a good idea to continue a new set of request. Please submit your manuscript to other relevant journals.

Sincerely yours,  
Tim Li  
Editor, ESR

Subject: Request 3rd review

Dear Dr. Li,

This is a formal request for a third review of the manuscript; one by an authentic experimental physicist, not a climate modeler.

The manuscript is about physical error analysis, not the modeling of climate.

I will be plain: reviewer #1 has made freshman undergraduate mistakes.  
The review is not competent. The reviewer is not a peer; his comments are not a peer review.

I am a physical methods experimental chemist. You can consult my most recent paper at the Journal of Chemical Physics:  
<http://scitation.aip.org/content/aip/journal/jcp/142/8/10.1063/1.4908266>

Physical error analysis is part of my professional competence. It is manifestly and demonstrably not, among climate modelers. I will send you that demonstration.

I am looking for an editor with the courage to be a scientist, Dr. Li.

Kindly yours,

Pat Frank

Dear Dr. Frank,

I very much regret to have to tell you that publication in our journal is not recommended. An explanation for this decision is given in the attached review reports (and on <http://ees.elsevier.com/earth/>). I hope that the comments contained therein will be of use to you.

Thank you for your interest in our journal.

Kind regards,  
Tim Li, PhD (Editor)
